

Welding Safety

Best Practices

Welders are in demand world wide

They work in heavy construction on pipelines for natural gas and the oil industry. Building ships or working in power plants, refineries, chemical plants and manufacturing facilities. The arc's are blindingly bright in hot and dangerous working conditions. Safety needs to be a primary consideration

The welder needs to be able to identify safety considerations that apply to his or her job along with steps needed to avoid injuries.

PPE

Personal Protective Equipment

- Body Protection
- Foot Protection
- Hand Protection
- Ear Protection
- Eye Protection
- Face Protection
- Head Protection

To Avoid Hazards: Use the mantra Of M C HAMMER **CAN'T TOUCH THIS!**

Experimentation:
Always upgrade to the safest PPE Available.

Conclusion:
It is in everyone's best interest to promote safety.

Eye/Face Protection

Hand Protection

Ear Protection

Hydration needs to be an essential consideration. In the words of every Urologist. "You don't drink enough water!". So flood those kidneys.
